Training Day 1

Topics Covered

1. Introduction to Artificial Intelligence

Artificial Intelligence is a branch of computer science that focuses on developing machines and computer systems capable of performing tasks that normally require human intelligence, such as learning, reasoning, problem-solving and decision-making.

2. History and Evolution of AI

Studied the development of Artificial Intelligence, from its early beginnings in the 1950s to modern AI applications such as virtual assistants, chatbots and intelligent automation systems.

3. Characteristics of AI

Learned about the major characteristics of AI:

- Learning from data and experience.
- Problem-solving and reasoning.
- Decision-making.
- Pattern recognition.
- Understanding and processing information.

4. Applications of Artificial Intelligence

Explored the use of AI in different fields:

- Healthcare – disease detection and medical diagnosis.
- Education – personalized learning systems.
- Banking – fraud detection.
- Transportation – self-driving vehicles.
- E-commerce – product recommendations.
- Security – face recognition and surveillance.

Tools and Technologies Used

Tool	Purpose
Google Chrome	Researching AI concepts and applications.
Google	Finding information about AI and its development.
YouTube	Understanding AI concepts through educational videos.
Google Colab	Introduction to the online Python programming environment.

Practical Learning / Activities

- Explored different real-world applications of Artificial Intelligence.
- Observed how AI is used in everyday applications such as Google Assistant, recommendation systems and chatbots.
- Discussed the difference between traditional computer programs and AI-based systems.

Learning Outcomes

- Understood the fundamental concept and importance of Artificial Intelligence.
- Gained knowledge about the history and evolution of AI.
- Identified the major characteristics and applications of AI.
- Developed a basic understanding of how AI is transforming different industries.
